# **Neighborhood Statistics**

**Air Pollutants** 

# Latino Neighborhoods and Exposure to Particulate Matter 2.5 (PM2.5), 2015-2017

Note:  $\mu g/m^3$  = one-millionth of a gram per cubic meter of air. Note: California's state standard for PM2.5 is an annual average of 12  $\mu g/m^3$  while the federal standard is 9  $\mu g/m^3$ 

average of 12  $\mu g/m^3$ , while the federal standard is 9  $\mu g/m^3$ . There is no state or federal or state standard for Diesel PM.

### PM2.5

**PM2.5** is produced from sources like vehicle exhaust, wildfires, and industrial activity. These fine air particles enter the lungs and bloodstream and worsen conditions like asthma and heart disease.

Latino neighborhoods had <u>higher exposure</u> to PM2.5 than NL white neighborhoods.

8 μg/m³ Latino neighborhoods **7** μg/m³

orhoods NL white neighborhoods

Annual mean concentration

### **Diesel PM**

**Diesel emissions** from vehicles and heavy-duty equipment release harmful particulate matter. Exposure to diesel exhaust can raise blood pressure, trigger heart attacks, and worsen lung conditions.

Latino neighborhoods had <u>higher exposure</u> to diesel PM than NL white neighborhoods.

# **Neighborhood Statistics (cont.)**

## **Proximity to Major Sources of Air Pollution**

Note: Exposure and proximity scores take into account the number of sites/facilities and their proximity to neighborhoods. Higher scores = more exposure to pollutants for residents.

Cleanup sites, such as Superfunds, are polluted with materials like lead and asbestos. Examples include old and abandoned processing plants and manufacturing facilities.

#### **Exposure Score**

Latino neighborhoods **NL** white neighborhoods

#### Hazardous waste facilities are

treatment, storage, and disposal sites. They can release toxic substances such as carcinogens, mercury, and asbestos into the air, water, and soil.

#### **Exposure Score**

0.6 0.3

Latino neighborhoods NL white neighborhoods

RMP facilities are sites where hazardous chemicals—like propane, pesticides, ammonia, and explosives—are present, posing risks to the environment and communities if released.

#### **Proximity Score**

ages 65+

28%

ages 0-5 ages 65+ NL white neighborhoods

## Health

Air pollution worsens pre-existing health conditions like asthma and coronary heart disease, increasing emergency visits and health complications. Long-term exposure to air pollution can cause chronic illness and premature death.

#### % of Adults (18+) with Pre-Existing Conditions

5% Latino

**NL** white neighborhoods neighborhoods

neighborhoods neighborhoods

**Asthma** 

#### Low Birth Weight (LBW) Babies

LBW babies are born under 5 lbs. LBW increases the risk of infant mortality, developmental delays, and chronic health conditions. Exposure to air pollution, such as PM2.5, contributes to higher rates of LBW

babies.

## Disadvantaged Communities

The CA Environmental Protection Agency defines disadvantaged communities based on their environmental pollution burden and population characteristics. Under Senate Bill 535, revenue from CA's Cap-and-Trade Program is partly directed toward these communities through the CA Climate Investments program to reduce pollution, enhance climate resilience, and improve health and economic well-being.
