# **Neighborhood Statistics**

**Extreme Heat Days** 

Latino Neighborhoods and Exposure to Extreme Heat Days (≥ 90°F), 2018-2022

Latino neighborhoods = Census tracts with 70%+ Latino residents **NL neighborhoods** = Census tracts with less than70% Latino residents

Extreme heat days are defined as days where the temperature is at or above 90°F. Exposure to extreme heat poses significant health risks.

### **Annual Number of Extreme Heat Days** (2018-2022)

At 90°F, the risk of heat-related illnesses and conditions increases significantly.

**142** days

average days ≥ 90°F annually

# Longest Period of Consecutive Extreme Heat Days (2022)

The Federal Emergency **Management Agency** defines a period of extreme heat in most of the U.S. as a period of 2 to 3 days above 90°F.

### **Barriers and Facilitators To Preventing Heat Exposure**

#### **Tree Canopy**

- · Tree canopy is land shaded by trees.
- Less tree canopy (fewer trees) = **Increased** exposure to extreme heat

% of Land with Tree Canopy

3% NL

Latino neighborhoods

neighborhoods

#### **Impervious Surfaces**

- Impervious surfaces are water-resistant surfaces such as concrete, asphalt, and stone.
- More impervious surfaces (like paved roads) = Increased exposure to extreme heat

% of Land with Impervious Surfaces

24%

Latino

neighborhoods

32% NL neighborhoods

### **Older Housing Units**

- Older housing units are homes built before 1970 that often have poor insulation and inefficient HVAC systems.
- More older homes = Increased exposure to extreme heat

% of Older Housing Units

**NL** neighborhoods

#### **Workers in Heat-Exposed Industries**

Industries with the highest exposure to extreme heat include agriculture, construction, waste management, and warehousing. Jobs in these sectors carry increased risks of heat-related illnesses such as heat stroke, dehydration, chronic heat stress, and even premature death.

% of Workers in Heat-Exposed Industries

43%

Latino neighborhoods

22% **NL** neighborhoods

#### Health

Extreme heat poses serious health risks, especially for people with conditions like heart disease, asthma, diabetes, and obesity. These individuals are more vulnerable because heat places extra stress on the body, worsening symptoms and increasing the risk of medical emergencies.

#### **Disadvantaged Communities**

The CA Environmental Protection Agency defines disadvantaged communities based on their environmental pollution burden and population characteristics. Under Senate Bill 535, revenue from CA's Cap-and-Trade Program is partly directed toward these communities through the CA Climate Investments program to reduce pollution, enhance climate resilience, and improve health and economic well-being.
